

Windows Security Event Findings

Event IDs 4624 · 4625 · 4688 · 4720 | Host: DESKTOP-QKP3UOG
Report generated: 2026-10-07 13:01

Executive Summary

Four Windows Security events were captured on host DESKTOP-QKP3UOG on 07 October 2026. Together they describe a short sequence of account and process activity: a local user account was created, a logon succeeded, a system process started, and an interactive logon attempt then failed. The timeline is consistent, all events originate from the same computer, and only the 4625 event is a failure.

Event Timeline (chronological)

Time	Event ID	Category	Result
10/07/2026 12:36:15 PM	4720	User Account Management	Audit Success
10/07/2026 12:37:48 PM	4624	Logon	Audit Success
10/07/2026 12:40:26 PM	4688	Process Creation	Audit Success
10/07/2026 12:40:44 PM	4625	Logon	Audit Failure

Key Observations

- Account creation (4720) at **12:36:15 PM** was performed by SYSTEM, the normal identity for programmatic account creation.
- A successful logon (4624) followed at **12:37:48 PM**, indicating the new account was usable shortly after creation.
- A failed interactive logon (4625) at **12:40:44 PM** reported 'Unknown user name or bad password' with Status 0xC000006D / Sub Status 0xC000006A, which specifically means the account existed but the password was wrong.
- Process creation (4688) at **12:40:26 PM** for lsass.exe is normal system activity and is not indicative of a threat on its own.
- All four events share the same computer name and a coherent timeframe, so they can be treated as one correlated activity chain.

Detailed Findings

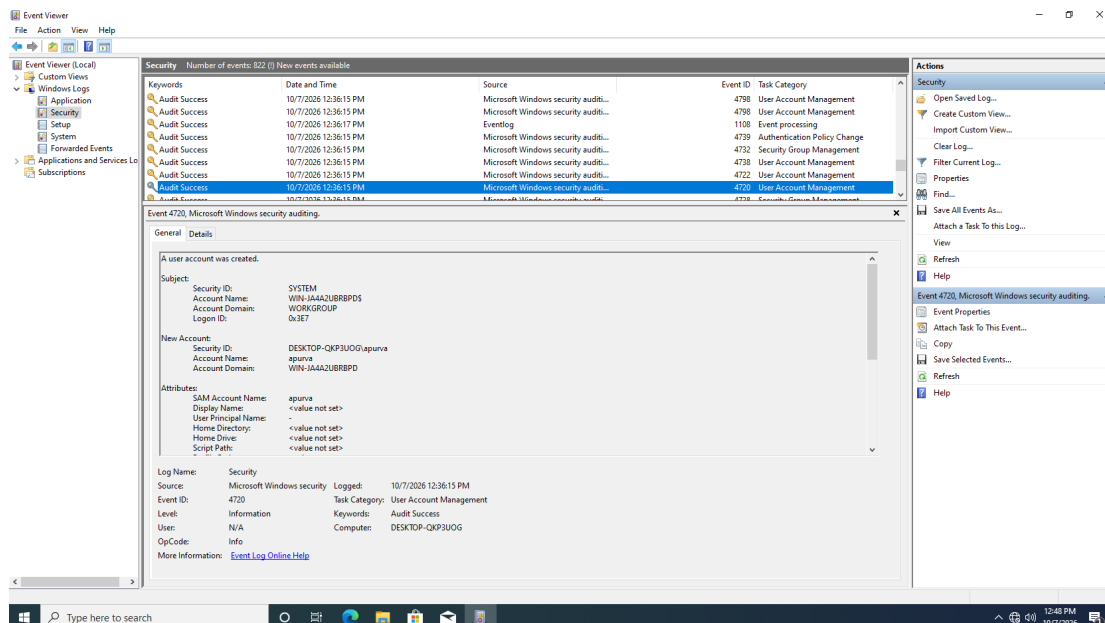

Event 4720 - A user account was created

Logged: 10/07/2026 12:36:15 PM **Category:** User Account Management **Keywords:** Audit Success

A new local user account named 'apura' was created on the host. The action was performed by the SYSTEM account with logon ID 0x3E7, which is the standard identity used by the Windows Local Security Authority when account management is triggered programmatically (for example by net user /add, PowerShell New-LocalUser, or an installer).

Subject Account	SYSTEM (WIN-JAA2UBRBDP / WORKGROUP)
New Account Name	apura
New Account SID	DESKTOP-QKP3UOG\apura
New Account Domain	WIN-JAA2UBRBDP
SAM Account Name	apura
Display Name	<value not set>
Home Directory	<value not set>
Script Path	<value not set>

Analyst note: The new account's domain is reported as WIN-JAA2UBRBDP while the computer field is DESKTOP-QKP3UOG. This mismatch indicates the account-creation record carries the original/default computer name, which is worth noting when correlating the events.

Event 4624 - An account was successfully logged on

Logged: 10/07/2026 12:37:48 PM **Category:** Logon **Keywords:** Audit Success

A successful logon was recorded roughly 90 seconds after the 'apura' account was created, which strongly suggests the newly created account was used immediately and validated successfully.

Log Name	Security
Logon Type	Interactive (see screenshot)
Logged	10/07/2026 12:37:48 PM
Level	Information
Keywords	Audit Success
Computer	DESKTOP-QKP3UOG

Analyst note: The General tab is collapsed in this capture, so the substituted/impersonation details and the new logon's SID list are not visible. Capture the expanded 'Subject / New Logon / Process Information' sections if full logon attribution is required.

Evidence screenshot - Event_4624_Account_Successful_Logon.png

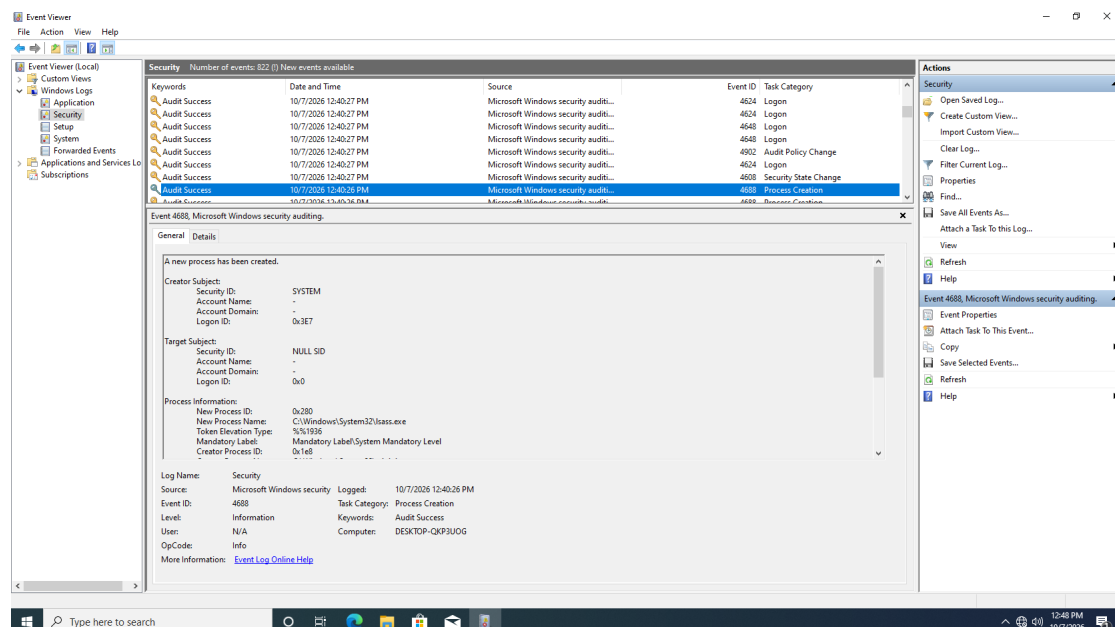

Event 4688 - A new process has been created

Logged: 10/07/2026 12:40:26 PM **Category:** Process Creation **Keywords:** Audit Success

Process creation auditing recorded the launch of lsass.exe, the Local Security Authority Subsystem. It is a normal system process; its presence here is expected and is shown for completeness alongside the account activity.

Creator Subject	SYSTEM (Logon ID 0x3E7)
Target Subject	NULL SID (Logon ID 0x0)
New Process ID	0x280
New Process Name	C:\Windows\System32\lsass.exe
Token Elevation Type	%%1936 (TokenElevationTypeFull)
Mandatory Label	Mandatory Label\System Mandatory Level
Creator Process ID	0x1e8

Analyst note: Command-line logging is not shown, so the full argument string of the process is unavailable. Enable 'Include command line in process creation events' to capture that detail in future.

Evidence screenshot - Event_4688_Process_Creation.png

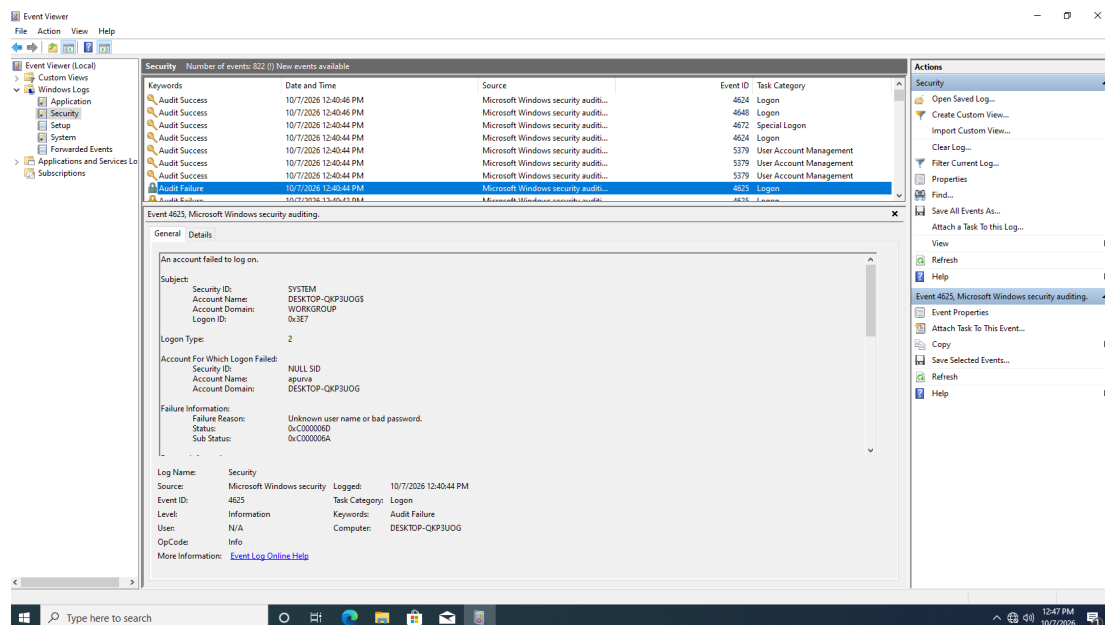

Event 4625 - An account failed to log on

Logged: 10/07/2026 12:40:44 PM **Category:** Logon **Keywords:** Audit Failure

An interactive (Type 2) logon attempt for the account 'apura' failed because the user name or password was incorrect. The failed account has a NULL SID, meaning authentication never succeeded and no SID was validated. This is the only failure among the four captured events.

Subject Account	SYSTEM (Logon ID 0x3E7)
Logon Type	2 - Interactive
Account Name	apura
Account Domain	DESKTOP-QKP3UOG
Account SID	NULL SID
Failure Reason	Unknown user name or bad password.
Status	0xC000006D (STATUS_LOGON_FAILURE)
Sub Status	0xC000006A (STATUS_WRONG_PASSWORD)

Analyst note: Sub Status 0xC000006A specifically indicates a bad password for an existing account, whereas 0xC0000064 would indicate an unknown user name. Combined with the earlier 4720/4624 pair, this points to a wrong-password entry rather than an unknown account.
